

The All-In-One Payment Terminal That Surpasses All Others.

The Eclipse™ payment terminal's multi-payment capability, integrated inkjet printer and check reader allows you to incorporate your payment needs into one piece of equipment.

Utilizing the Eclipse payment terminal, you can authorize and settle credit cards, (including Visa® and MasterCard® Purchasing Cards, Level II), and debit cards, along with eCheck acceptance. Special industry options are also available.

Features & Benefits

Touch Screen Capability

A light tap is all it takes to follow the intuitive prompts as they guide you quickly through each transaction. The innovative touch screen application is a user-friendly interface that allows for simple training and ease-of operation. The back-lit screen is perfect for low light work areas.

Integrated Inkjet Printer

The integrated inkjet printer requires less counter space and reduces cables and cords. The combined terminal and inkjet printer is more cost effective than purchasing equipment separately.

Integrated Check Reader

The integrated check reader reads check information twice—reducing MICR read errors and converts paper into electronic items more accurately.

VOIDS and FRANKS CHECKS AUTOMATICALLY

No more messy stamps. The eChecks are automatically voided, and non-eChecks are franked, saving time and minimizing error.

Driver's License Magnetic Swipe

Eliminates manual entry of payment cards and driver's license (for licenses with magnetic stripe), speeding up check-out time and reducing procedural errors.

Full Reporting Capability

Provides easy access to all payment information, including total and detail reports for each payment type.

Large Batch Capacity

The Eclipse payment terminal stores 300 check and 300 card transactions; "BATCH ALMOST FULL" prompt at 250 transactions.

Industry Features

Special features are available for the retail and restaurant environments, including Address Verification Service (AVS), CVV2, Clerk/Server ID, IRS TRAC, tip reporting, and bar tab.
